

Prism Diagnostic — Delivery Operating Model

Objective

This document defines the complete operational delivery model for the Prism Diagnostic engagement from:

- Client onboarding
- Internal handoff
- Delivery execution
- Quality assurance
- Readout and closure
- Feedback collection
- Follow-on conversion preparation

The purpose of this system is to:

- Maintain delivery consistency
- Protect margins
- Improve customer experience
- Reduce operational chaos
- Standardize consultant execution
- Increase follow-on attachment rate
- Build a scalable consulting delivery engine

1. Delivery Structure Overview

Core Delivery Team

1. Lead Consultant

Responsibilities:

- Owns client relationship
- Conducts interviews
- Leads synthesis
- Presents findings
- Owns strategic recommendations
- Drives follow-on positioning naturally

Target Hours:

- 18–25 hours per engagement
-

2. Analyst

Responsibilities:

- Documentation
- Stack inventory mapping
- Workflow diagram creation
- Data organization
- Report formatting
- Research support
- Internal coordination

Target Hours:

- 20–35 hours per engagement
-

3. Operations Coordinator

Responsibilities:

- Scheduling
- Client reminders
- Asset collection
- CRM updates
- Timeline tracking
- Internal coordination
- Client communication support

Target Hours:

- 4–8 hours per engagement
-

4. Optional Technical Advisor

Responsibilities:

- Reviews automation recommendations
- Reviews integrations
- Reviews stack architecture
- Provides implementation feasibility guidance

Engaged only when required.

Target Hours:

- 2–4 hours

2. Delivery Lifecycle

The engagement is divided into 8 operational stages.

Stage	Timeline	Owner	Goal
Sales Handoff	Day 0	Sales + Ops	Smooth transition
Client Onboarding	Day 1–2	Ops	Set expectations
Intake Collection	Day 1–3	Ops + Analyst	Gather operational data
Stakeholder Interviews	Day 3–8	Consultant	Understand workflows
Analysis & Synthesis	Day 8–12	Consultant + Analyst	Build findings
QA Review	Day 11–13	Senior Review	Maintain quality
Final Readout	Day 13–15	Consultant	Present roadmap
Follow-Up & Feedback	Day 16–30	Ops + Consultant	Measure satisfaction

3. Sales-to-Delivery Handoff Process

Objective

Prevent information loss between sales and delivery.

Mandatory Handoff Requirements

Sales rep must provide:

- Client company overview
- Revenue range
- Team size
- Key operational pain points
- Main tools used
- Decision maker information
- Expectations discussed during sales
- Potential follow-on opportunity indicators
- Any risks or concerns noticed during sales

Internal Handoff Call

Duration:

- 15–20 minutes

Participants:

- Sales rep
- Operations coordinator
- Lead consultant

Discussion Points:

- Client personality
 - Urgency level
 - Key operational problems
 - Areas needing deeper investigation
 - Risk flags
 - Possible follow-on fit
-

4. Client Onboarding Process

Step 1 — Sales-to-Ops Handoff

Once the deal is closed:

- Sales hands over the client to operations
 - Internal notes are transferred
 - Pain points and expectations are documented
 - Stakeholder details are shared
 - Ops coordinator becomes the primary coordination owner
-

Step 2 — Welcome & First Intake Form

Sent within:

- 2–4 hours after payment confirmation

The first onboarding email includes:

- Welcome message
- Engagement overview

- Timeline explanation
 - Scheduling link for first interview
 - First intake form link
 - Communication process
 - Deliverables overview
-

Step 3 — First Intake Form

Objective: Collect high-level operational understanding before the first interview.

The first form should collect:

- Company overview
- Revenue range
- Monthly recurring revenue (if applicable)
- Average monthly cash flow
- Revenue collection cycle
- Payment collection process
- Outstanding receivables challenges
- Profitability visibility
- Team size
- Departments
- Current tools/software stack
- Major operational pain points
- Existing workflows
- Current bottlenecks
- Main operational goals
- Key stakeholders

This allows the consultant to prepare intelligently before the first session.

Step 4 — First Interview / Discovery Call

Duration:

- 60–90 minutes

Objectives:

- Understand the business deeply
- Identify operational patterns
- Identify founder dependency

- Identify workflow friction
- Understand current systems
- Clarify major operational challenges
- Identify hidden bottlenecks

This call is primarily exploratory and diagnostic.

Step 5 — Second Data Collection Form

After the first interview, the client receives a second structured form.

Objective: Collect deeper operational and workflow-level information.

This form may include:

- Department-specific workflows
- Internal communication systems
- Approval processes
- Reporting systems
- Customer journey steps
- Team responsibilities
- SOP availability
- Integration details
- Automation usage
- Revenue operations workflow
- Invoicing and billing systems
- Cash flow tracking methods
- Payment reconciliation process
- Sales pipeline visibility
- Revenue leakage indicators
- Financial reporting structure
- Operational KPIs
- Screenshots or workflow recordings

This stage increases operational visibility before final analysis.

Step 6 — Second Interview / Workflow Analysis Call

Duration:

- 60–90 minutes

Objectives:

- Validate findings from first interview
- Deep dive into workflows
- Map operational leakage
- Understand execution bottlenecks
- Analyze communication flow
- Understand stack fragmentation
- Clarify implementation feasibility

This call focuses more on operational structure and process breakdown.

Step 7 — Final Consultation & Readout Call

Timeline:

- Conducted between Day 13–14 of the engagement

Duration:

- 60–90 minutes

Objectives:

- Present findings
- Explain operational issues
- Walk through workflow analysis
- Explain bottlenecks and dependencies
- Present prioritized recommendations
- Explain the 90-day action roadmap
- Discuss operational opportunities
- Naturally introduce relevant follow-on support if appropriate

During this session, the consultant presents the completed diagnostic findings and strategic recommendations.

This acts as the primary strategic consultation and final presentation session.

Step 8 — Final Document & Asset Delivery

Timeline:

- Final ZIP package delivered within the 15-day engagement window
- Typically delivered within 24–48 hours after the final consultation call

The client receives a final ZIP package containing:

Included Assets

- Full PDF report
- Workflow visuals and diagrams
- Operating stack visuals
- 90-day action roadmap
- Executive summary deck
- Recorded walkthrough video
- Supporting documentation
- Any additional visual assets

This delivery marks the formal completion of the Prism Diagnostic engagement.

Step 9 — Feedback & Follow-Up

Within:

- 24–48 hours after delivery

Client receives:

- Feedback form
- Satisfaction survey
- Testimonial request (if appropriate)
- Follow-on discussion scheduling option

The operations team tracks:

- Customer satisfaction
 - Implementation readiness
 - Follow-on interest
 - Delivery quality feedback
 - Operational improvement suggestions
-

5. Interview & Discovery Framework

Stakeholder Interviews

Target:

- Maximum 3–4 stakeholder interviews per engagement

Duration:

- 45–60 minutes each

The Prism Diagnostic is intentionally designed as a focused operational engagement, not a large-scale enterprise consulting process.

The goal is to gather enough operational visibility to identify major workflow, communication, revenue operations, and execution bottlenecks without creating excessive meeting overhead for the client.

Interview selection should prioritize the most operationally relevant stakeholders.

Possible Stakeholders:

- Founder
 - Operations manager
 - Sales lead
 - Customer success
 - Marketing
 - Finance/admin
 - Delivery managers
-

Interview Objectives

Identify:

- Bottlenecks
 - Founder dependency
 - Manual processes
 - Tool fragmentation
 - Delays
 - Rework
 - Communication gaps
 - Reporting inefficiencies
 - Approval bottlenecks
 - Customer delivery friction
-

Standard Interview Structure

Section 1 — Role Understanding

- What does your role involve?
- What systems/tools do you use daily?

Section 2 — Workflow Mapping

- Walk through a typical process.
- Where do delays happen?
- What requires manual work?

Section 3 — Operational Pain

- What wastes the most time?
- What breaks frequently?
- What depends too much on leadership?

Section 4 — Improvement Signals

- What would make operations easier?
 - What tools/processes feel unnecessary?
-

6. Internal Analysis & Synthesis System

Analyst Responsibilities

Build:

- Tool inventory
 - Workflow maps
 - Dependency maps
 - Operational issue list
 - Interview summaries
 - Process documentation
-

Consultant Responsibilities

Develop:

- Root cause analysis
 - Priority ranking
 - Strategic recommendations
 - 90-day roadmap
 - Follow-on recommendations
-

Core Framework Categories

All findings should be categorized into:

- Stop
- Fix
- Simplify
- Integrate
- Prepare

Priority Scoring Model

Each recommendation should include:

Metric	Score
Impact	1–5
Difficulty	1–5
Time Savings	1–5
Revenue/Margin Impact	1–5
Urgency	1–5

This creates a structured prioritization system.

7. Quality Assurance Model

Objective

Prevent low-quality recommendations and generic outputs.

Mandatory QA Review

Every engagement must be reviewed before delivery.

Reviewer checks:

- Recommendation quality
 - Strategic logic
 - Clarity
 - Workflow accuracy
 - Actionability
 - Consistency
 - Professional presentation
-

QA Checklist

Delivery Quality

- Are recommendations specific?
- Is the roadmap realistic?
- Are workflows understandable?
- Are findings tied to actual interviews?

Strategic Quality

- Is prioritization logical?
- Are recommendations financially reasonable?
- Are operational risks identified?

Presentation Quality

- Professional formatting
 - Clean diagrams
 - Clear executive summary
 - Easy-to-understand action plan
-

8. Final Deliverables

Each client receives:

1. Operating Stack Map

Visual representation of systems and integrations.

2. Workflow Diagrams

Current-state workflow analysis.

3. Operational Findings Report

Includes:

- Bottlenecks
- Root causes
- Operational leakage
- Tool overlap
- Founder dependencies

4. 90-Day Action Plan

Includes:

- Prioritized actions
 - Suggested owners
 - Expected impact
 - Estimated effort
 - Sequenced execution plan
-

5. Executive Readout Deck

Presentation version of findings.

6. Recorded Walkthrough

15–20 minute Loom/video explanation.

9. Readout Process

Duration

- 60–90 minutes

Participants

- Founder
 - Key leadership
 - Consultant
-

Readout Structure

Section 1 — Executive Summary

- Major operational patterns
- Biggest risks
- Biggest opportunities

Section 2 — Workflow Findings

- Current state analysis

- Friction points
- Dependency areas

Section 3 — Priority Recommendations

- Immediate fixes
- Medium-term changes
- Strategic operational improvements

Section 4 — 90-Day Roadmap

- Sequenced execution plan

Section 5 — Follow-On Recommendation

Position naturally based on findings.

Example:

- Workflow redesign sprint
 - Automation implementation
 - Fractional operations support
 - Stack rationalization
-

10. Follow-On Conversion Process

Objective

Convert diagnostic trust into implementation engagement.

Important Rule

The follow-on recommendation must feel earned.

Never aggressively push implementation.

Instead:

- connect recommendations to operational pain
 - explain business impact
 - explain execution complexity
 - explain why support may help
-

Follow-On Discussion Timing

Mention lightly during:

- interviews
- workflow discussions
- readout

Formal recommendation happens:

- during readout
 - post-readout follow-up
-

11. Feedback & Customer Satisfaction System

Immediate Post-Readout Survey

Sent within:

- 24 hours

Questions:

Delivery Experience

- How satisfied were you overall?
- Was the process organized?
- Was communication clear?

Strategic Value

- Did the findings feel accurate?
- Were recommendations actionable?
- Did the engagement create clarity?

Business Impact

- Which recommendation was most valuable?
- What problem became clearer?

Scoring

- Rate experience from 1–10
 - Would you recommend us?
-

30-Day Follow-Up Call

Objectives:

- Understand implementation progress
- Identify blockers
- Collect testimonials
- Explore follow-on engagement
- Measure recommendation adoption

Key Metrics to Track

Metric	Target
NPS	8+/10
Refund Rate	Under 5%
Follow-On Attach Rate	25–35%
On-Time Delivery	95%+
Positive Testimonial Rate	60%+
Recommendation Adoption	50%+

12. Internal Operating Systems

Recommended Internal Stack

Internal CRM & Operations System

The Prism Diagnostic operates through an inbuilt centralized CRM and operations management system used across the entire organization.

The internal system manages:

- Lead tracking
- Sales pipeline management
- Sales-to-ops handoff
- Client onboarding
- Form submissions
- Stakeholder management
- Delivery tracking
- Interview scheduling
- Internal task management
- Timeline tracking

- Consultant coordination
- Asset management
- Follow-on opportunity tracking
- Feedback collection
- Client communication logging
- Reporting and analytics

The purpose of the centralized internal system is to:

- Maintain operational visibility
 - Reduce communication fragmentation
 - Standardize delivery workflows
 - Improve accountability
 - Improve scalability
 - Maintain delivery consistency across regions
-

Project Management

- ClickUp
- Notion
- Asana

Workflow Mapping

- Whimsical
- Miro
- Lucidchart

Communication

- Slack
- Google Meet
- Zoom

Documentation

- Google Docs
- Notion

AI Assistance

- ChatGPT
 - Claude
 - Gemini
-

13. Operational Principles

1. Synthesis Quality Is The Product

The PDF is only the container.

2. Scope Discipline Protects Margins

Avoid implementation creep.

3. Every Engagement Must Feel Personalized

Templates support delivery. They should never feel generic.

4. Operational Clarity Is The Core Value

The customer is buying confidence and direction.

5. Follow-On Trust Is Earned Through Quality

Great diagnostics create implementation demand naturally.

14. Scalability Roadmap

Phase 1 — Founder-Led Delivery

- Refine frameworks
 - Build templates
 - Gather testimonials
 - Improve positioning
-

Phase 2 — Standardized Delivery

- SOPs
- QA systems
- Role specialization
- Internal scorecards

Phase 3 — Scalable Consulting Engine

- Industry-specific variants
 - Benchmark databases
 - Proprietary scoring systems
 - AI-assisted synthesis pipelines
 - Multi-region consultant teams
 - Advanced operational analytics
-

Final Principle

The Prism Diagnostic should operate like a productized consulting system, not a chaotic custom consulting business.

Consistency, speed, synthesis quality, and operational clarity are the foundations of scalability.
